

# PROTECT AGAINST WATER HEATER LEAKS NOW WITH

## WAGS

Water And Gas Safety Shut-Off Valve

No matter the brand, every water heater will fail, usually within 7 to 10 years. A leaking tank keeps refilling...and leaking. Left undetected, it can leak hundreds, even thousands, of gallons of water. For peace of mind, ask us to install a WAGS® Water And Gas Safety Valve on your water heater. **The WAGS® automatically shuts off the water supply (and the gas supply for gas-fired heaters)** when it detects a water heater leak, thus preventing disastrous flooding and damage to your home and belongings. Call us soon!
